December 15, 2000

SUBJECT: Original New Drug Application #21-317

Extra Strength Bayer Migraine 500 mg buffered aspirin OTC

Dear Sir/Madam:

Pursuant to section 505(b)(1) of the Act and 21 CFR 314 50, Bayer Corporation, Consumer Care Division (Bayer) is submitting the New Drug Application (NDA) for EXTRA STRENGTH BAYER MIGRAINE (500 mg buffered aspirin). We also refer you to our IND for all investigational activities and communications related to the subject product, and to the pre-NDA meeting (9/21/00) between representatives of the Agency and Bayer. As requested in the meeting, Bayer is also providing the Final Study Reports, Tables and Data Listings on a CD-ROM with bookmarks to assist in the review.

This product is intended for OTC use as a migraine treatment. It is a bilayer caplet which combines aspirin and calcium carbonate in an immediate release formulation. This product has been marketed, in accordance with the Internal Analgesic Monograph, for nearly ten years.

A significant body of information exists for buffered aspirin in the OTC monograph cited, as well as, in this application. The drug is well characterized and well documented from a technical perspective.

The safety and efficacy for EXTRA STRENGTH BAYER MIGRAINE are supported by the adequate and well controlled trials conducted in subjects suffering from migraine. The primary efficacy variable designated in the clinical trials was the percent responders, defined as those subjects who experienced a change in pain intensity from a baseline evaluation of moderate to severe, to mild or none at 2 hours post-dose. Secondary efficacy variables included reduction of symptoms of nausea, photophobia and phonophobia.

Our clinical program also included a bioequivalence trial to compare the plain aspirin utilized in the clinical program to the proposed buffered aspirin. Bioequivalence was established.

The proposed labeling for Extra Strength Bayer Migraine follows Drug Facts Format. In addition to Bayer labeling, also enclosed, please find labeling for the identical formulation

The labeling incorporates statements approved under the Internal Analgesic Tentative Final Monograph, as well as, comments provided by FDA during the pre-NDA meeting.

Provided, under separate cover, to the FDA Philadelphia District Office is a field copy of the technical sections of this application, the application form and the technical summary. Bayer certifies that the field copy is a true copy of the technical section contained in the archival and review copies of this submission.

The drug review process for this NDA is covered by the Prescription Drug User Fee Act (PDUFA II). Bayer certifies that the entire full application fee is being provided to FDA, under separate cover. The assigned User Fee number for this application is #4029.

This application and all communications or materials submitted to the Agency in connection with this matter, now or in the future, constitute privileged and confidential commercial information and/or trade secrets that may not be disclosed to any third party without express prior written consent from Bayer.

We look forward to maintaining an open and collaborative dialogue to facilitate the overall review process. Please contact the undersigned at 973-408-8181 should you have any questions or requests.

Sincerely,

Bayer Corporation
Bayer Consumer Care Divison

Judy Doyle

Associate Director, Regulatory Affairs

SUBJECT: NDA #21-317

General Correspondence: Drug Substance Inquiry

Dear Mr. Puttagunta:

BC

Reference is made to the original New Drug Application for 500 mg aspirin for the treatment of migraine submitted December 15, 2000. In the Chemistry, Manufacturing and Controls section of this submission, reference is made in Volume 2, page 3 to four drug substance facilities as follows:

The drug product, Extra Strength Bayer (ESB) Migraine, contains Aspirin USP, which is the active principle, and Calcium Carbonate USP, which acts as a buffering agent.

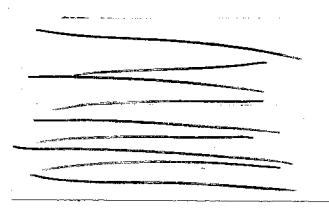

Aspirin USP will be manufactured, tested and released by:1

Aspirin USP and 90:10 Calcium Carbonate USP/Pregelatinized Starch NF may be accepted from a vendor certificate of analysis, with a confirmatory USP identification test for aspirin and calcium carbonate performed at a minimum upon receipt of the respective ingredient by Bayer Corp., Myerstown, PA (the drug product manufacturer).

Quimica Farmacéutica Bayer, S.A.Bayer is under the ownership of Bayer.

This material may be referred to in the cited DMFs as 90:10 or 91:9 Calcium Carbonate USP/Pregelatinized Starch NF. For consistency, the 90:10 designation will be used throughout the NDA CMC section.

00101111

The four drug substance facilities listed above are prepared for pre-approval inspections in conjunction with NDA 21-317.

Sincerely,

Bayer Corporation Bayer Consumer Care Divison

Extra Strength Bayer Migraine 500 mg buffered aspirin OTC General Correspondence: ISS

Dear Sir/Madam:

This correspondence provides clarification, as requested, for the paper copy of the Integrated Summary of Safety (ISS) section of the NDA originally submitted December 15, 2000. The pagination on the ISS (located at the top of each page) is numbered from 1 to 64. Pages 51 to 64 were inadvertently omitted from the ISS due to an administrative error. These pages, 51 to 64, are included in the Safety Update section of the NDA.

In the electronic PDF file ISEISS/ISEV6, pages 1 to 64 of the Integrated Summary of Safety are correctly included in one section. There is no electronic file provided for the Safety Update section of the NDA.

For your reference, please refer to the following table that lists all information included on the CD-ROM previously provided. Hyperlinks were inserted throughout the reports. Any place in the text where a table is referenced with a bracket and page number, clicking on the page number will pull up the table.

Wait:

Thank you for taking the time this afternoon to discuss the 3/16/01 Information Request (IR) regarding NDA 21-317. To summarize our issues discussed, please note the items below. Since it is our intention to provide adequate responses to the IR in a timely manner, we are seeking concurrence on the items noted.

- The case report data sets will be provided to FDA in SAS transport files with accompanying code lists and derivation formulas. There will be no linking to previously submitted NDA text or files.
- An ITT Analysis will be provided for the 1180 subjects which includes a comparison of headache response at 2 hours and the proportion of patients with secondary migraine symptoms at 2 hours. Bayer is not intending to reanalyze other groups unless requested.
- Bayer will provide a description of the literature search method used to provide the worldwide safety report.

Bayer intends to provide a complete response to the IR no later than April 4th, 2001.

AIDA ORIOMAMENDMENT

General Correspondence: Response to Information Request

Dear Dr. Ganley:

This correspondence provides the information requested by FDA May 18, 2001 regarding NDA 21-317. These issues relate to variable definitions, extrapolation, and re-analysis of protocols S98-072 and S98-074. For ease of reference, the FDA Reviewer inquiry item appears bolded, followed in standard type, by the Bayer response.

Question:

1. Please clarify and define the variables "Time1, Time2, Time3, etc" located in Study S98-072.

Response:

TIME1 is the time at which the 30-minute evaluation was made by the subject. TIME2, TIME3, TIME4, TIME5, TIME6, and TIME7 are the times at which the 1-hour, 2-hour, 3-hour, 4-hour, 5-hour, and 6-hour post-dosing evaluations were made, respectively.

To assist in understanding the database structure, it may be useful to note that these times were converted to military time using an additional variable (AP1-AP7) which specifies if the observation was recorded in the a.m. or p.m. The variables LTIME1 through LTIME7 represent the equivalent military time at which the post-dosing evaluations were made.

The analysis of the data relies on determining the length of time between dosing and the post-dosing evaluations. The variables DIFF1-DIFF7 contain the elapsed times between the post-dosing evaluation and the time at which the subject dosed with study medication. The elapsed time between dosing and the 2-hour evaluation is calculated by the formula: DIFF3 = LTIME3 - LMEDTIME where LMEDTIME is the military time of dosing with the study medication.

To summarize, the variables TIME1 to TIME7 record the post-dosing evaluation times which need to be processed with the am/pm flags and the time of dosing to yield the elapsed time between dosing and post-dosing evaluations.

Question:

2. Please provide the formula used to determine the extrapolated results of Headache Severity at 2 hours (i.e. LSEV3).

Response:

For reference, the following is Section 11.4.2.2 from the S98-072 report that outlines the methods used in the extrapolation/interpolation of data. These methods were used consistently across all studies.

Section 11.4.2.2 HANDLING OF DROPOUTS OR MISSING DATA

- a. If a subject remedicated with rescue medication before the end of the 6-hour study, the subsequent efficacy variable scores (pain intensity scores, nausea, photophobia, phonophobia, and ability to function) were set equal to either the baseline score or the score recorded immediately prior to remedication, whichever score was more severe.
- b. Efficacy variable scores for the 6-hour study period, excluding baseline, which remained missing after the application of (a) above were replaced by carrying forward the preceding non-missing score.
- c. Any missing efficacy variable score for a subject who medicated to treat a recurrence was set equal to either the baseline score or the most recent non-missing score recorded prior to medication, whichever score was more severe.
- d. The 2-hour reading was interpolated in the event that the 2-hour evaluation was off-schedule by more than 15 minutes. Linear interpolation was used if there was observed data that preceded and followed the 2-hour clock time. The last observation was carried forward if the data subsequent to the 2-hour value was missing.

As mentioned in (d), the 2-hour reading was interpolated in the event that the 2-hour evaluation was off-schedule by more than 15 minutes. Linear interpolation was used if there was observed data that preceded and followed the 2-hour clock time. The last observation was carried forward if the data subsequent to the 2-hour value was missing.

Formulas for extrapolation/interpolation are as follows:

	0
	· =
	A Lar
	•
	· · · · · · · · · · · · · · · · · · ·
	make at
	The same of the sa
·	
	

Question:

3. It does not appear that the actual 2-hour efficacy results were used in the calculation. Please explain.

Example: Patient 18 (Study S98-072) had at "TIME3" (the 2 hour timepoint) a headache severity of 2 (SEV3), i.e., a non-responder. "TIME3" for this subject actually corresponded to 3 hours and 30 minutes (TIME3 minus BASETM). "TIME1" (the ½ hour timepoint) actually occurred 2 hours after "BASETIM" and had a severity of 1 (SEV1) which would have made this subject a responder.

Response:

All calculations that determine time from dosing with study medication should use the variable LMEDTIME which is the time that the subject dosed with study medication, not the time the migraine began (BASETM). Although subject 18's migraine began at 3:30 pm, this subject did not dose with study medication unit 5:00 pm. All subsequent evaluations were made according to protocol at 30 minutes, 1-, 2-, 3-, 4-, 5-, and 6-hours post-dose.

Question:

4. Please re-analyze the statistical calculations for all three studies using those timepoints closest to the actual 2-hour assessment as opposed to "TIME3". We request a LOCF algorithm for missing data. Those subjects with their first post-treatment efficacy assessment ≥3 hours should not be included in the 2-hour analyses.

Response:

In a telephone contact between Dr. Walt Ellenberg and Bayer's Joanne Robinett 5/22/01, Bayer was advised not to re-analyze the data since addressing the variable definitions and extrapolation criteria would be adequate from the Agency's standpoint. However, upon further review of the data, 3 subjects in the S98-072 study made the 2-hour evaluation ≥ 3 hours subsequent to dosing and 4 subjects in the S98-074 study recorded their 2-hour evaluation at ≥ 3 hours post-dose. All subjects of S98-073 provided the 2-hour evaluation at less than 3 hours. The evaluation times and severity scores for those subjects whose 2-hour evaluation was ≥ 3 hours from the time of dosing are provided below. Review of these data reveal that using the actual assessment closest to the 2-hour evaluation greater or equal to 3 hours. Additionally, the algorithm used in the event that the post-treatment efficacy assessment was missing and not concurrent with remedication was a LOCF (See extrapolation rule (b) above).

Please note that "Baseline" refers to the time at which the subject dosed with study medication.

This correspondence responds to your request for clarification on the use of the extra strength descriptor with the aspirin migraine product. The proposed label submitted in the original application stated "Bayer Extra Strength Migraine".

It is our intention, based on the 10/5 teleconference, to relocate the descriptor away from migraine and use it in conjunction only with the Bayer aspirin name on the principle display panel.

Extra Strength Bayer Migraine Pain

Please contact me if there are any further issues for discussion.

NDA #21-317 Extra Strength Bayer Migraine (500 mg buffered aspirin) OTC

October 9, 2001

Walter Ellenberg, Project Manager
Division of Over-the-Counter Drug Products
HFD-560
Food and Drug Administration
Center for Drug Evaluation and Research
9201 Corporate Blvd.
Rockville, MD 20850-3202

General Correspondence: Response to Labeling Comments

Dear Dr. Ellenberg:

Reference is made to the October 2, 2001 correspondence and the October 5, 2001 teleconference, both of which addressed the proposed labeling for the 500 mg aspirin data in support of migraine.

In order of appearance in your written correspondence, the following labeling issues are addressed:

- 1. The Bayer aspirin migraine product will be labeled for the treatment of mild to moderate migraine pain as supported by clinical data.
- 2. The PDP will represent the statement of identity as "buffered aspirin tablets 500 mg" followed by "pain reliever" and will appear prominently with the trade name.
- 3. "Extra Strength" will be used in connection to the trade name, and not to the indication.
- 4. The statement "Plus Helps Protect Against Stomach Upset" will not be used in product labeling. Other statements, such as "contains buffering ingredients" may be used.
- 5. The statement "Ask Your Doctor About Other Benefits of Bayer Aspirin" will not appear in the product labeling.
- 6. The labeling will comply fully with 21 CFR 201.66 format and content requirements for OTC drug products.
- 7. The Drug Facts prototype provided by FDA will be used for the Bayer Migraine product. One statement will be modified as agreed to state, "Ask a doctor or pharmacist before use if you are taking any other drug on a regular basis".

We thank you for your prompt attention to the review of NDA 21-317. Please contact the undersigned at 973-408-8181 with questions.

Sincerely,

Bayer Corporation
Bayer Consumer Care Divison

Judy Doyle

I rec. a call from Judy Dayle - we descussed the following -
Dall papers are he But one -
I told her to som from and go ahandered
send all pages that she carrielly has. Then Forge a
soud the others when they arrive.
(2) They have sub-atthal a equest of FOS for the AETES
database - however, they do not know the France
form - I told her to follow-up with vog. frogen
to at a estimate of the time to completion.
Investigation: Judy total by her medical person (liverbor) that
FDA is muestigating one of the contract other. They had been contract
by the CRO regarding this matter - I toll her that I was
uncertain as to the potential or states of such inspection and
that it not a matter that I deally normally handle.
